SUPER HELICAL HYBRID BLOWERS

Plug and Play unit, Compress your Energy Cost and Life Cycle Cost

For positive and negative conveying, boosting
and exhausting of air and neutral gases

ROTARY HELICAL BLOWER

SWAM a leader in Blower technology, has during its nearly three decades of experience in design & manufacturing of blowers has acquired exceptional product development capabilities to meet the stringent quality and performance requirements and to confirm to the customer's tough & diversified specification. Emphasis has been on innovative design, precision engineering and responsiveness to customers.

Swam, thus offers most advance technology next generation Super Helical Hybrid Blowers; equipped with latest features, enabling it more reliable, energy efficient and lower maintenance.

Blowers are ruggedly built with appropriate rotor shaft design, aiming at low deflection and critical consideration. The rotors are supported on heavy duty antifriction oil lubricated bearings. The rotor profile of Super Helical Hybrid Series are computer generated enabling better uniform clearances and higher volumetric efficiency.

The blowers have very high accuracy & manufactured on CNC machines. The blowers are available for flows upto 45,000 m³/hr. and pressure upto 1.1 kg/cm². The blowers are suitable for continuous operation to work as compressors or as exhausters.

FOCUS ON QUALITY & RELIABILITY

Emphasis on quality & performance is a commitment of every individual at SWAM beginning at grass root level. The quality control is practiced at all levels of the organization & all its aspects are thoroughly complied with the specified standard and specification, till the product gets delivered. The quality assurance system encompasses self quality control by each worker, supervised by quality control engineers. Each blower undergoes thorough & stringent tests at different stages of manufacturing and are test run for several hours prior to despatch as per the relevant code, customers' specification and approved quality plan. These functions are carried out by our team of dedicated, qualified & experienced engineers. In pursuit and in recognition there of, our products are accredited to ISO 9001:2015 certification.

Our blowers comply to European standard of machinery directives and are CE certified.

We have more than 22 CNC Machines to produce precise & accurate components of Blowers and Pumps.

ADVANCE MANUFACTURING SYSTEM

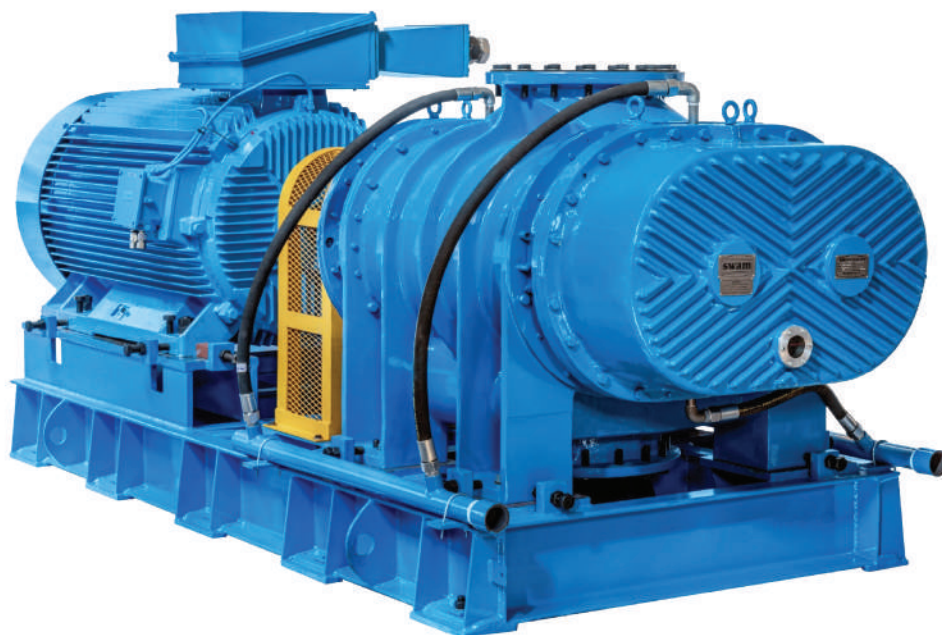

Swam has the most advance manufacturing system with a large number of CNC Machines installed in our state of art Five plants. The blowers and other products are manufactured with most optimum profile resulting higher efficiencies, high displacement, lower slippage. Thus our products are more energy efficient compared to other.

WORKING PRINCIPLE

The working principle of Helical blowers is similar to that of Lobe blower type. The rotors, move opposite to each other, maintaining fine clearances, in perfect synchronization through a set of precision timing gears. As the rotation proceeds, the trapped gas moves along until it reaches the discharge port raising its pressure against the system resistance. The precise clearances within the blower-makes possible the rise in pressure with least internal slip loss. The delivery is non-pulsating smooth and with lower sound emission.

HELICAL SERIES

The next generation helical Series Blowers offers unmatched performance operation & negligible maintenance due to the superior & advanced features. The blowers are manufactured on sophisticated advance CNC machines and the rotor profiles are computer generated. The helical Series are latest in technology in the Rotary Blower Design and are energy efficient with guaranteed negligible maintenance. These blowers have features, that make them unmatched in performance and energy efficient.

INTEGRATED PACKAGE INSIGHT VIEW

1) High Efficiency Helical Hybrid Blower Heart

2) High efficiency motor (IE-4)

3) High efficiency VFD

4) HMI touchscreen panel

5) PLC/Microprocessor control panel

6) High class safety instruments

7) Acoustic Enclosures.

SUPER HELICAL HYBRID BLOWERS

- Plug and Play Machine
- Unmatched Technology
- Superior Performance
- Energy Efficient

Driving Industries forward with innovative products and best in class performance.

Super Helical Blower are most advanced machine with complete integrated package with VFD Touchscreen, HMI, Complete instruments for interlocking and logic control.

It is most suited for SBR based STP operation due to high turn down capability as low as 20% and beneficial for process optimisation and energy saving, whereas other blowers have operational limitation and has 100-60% turndown limit.

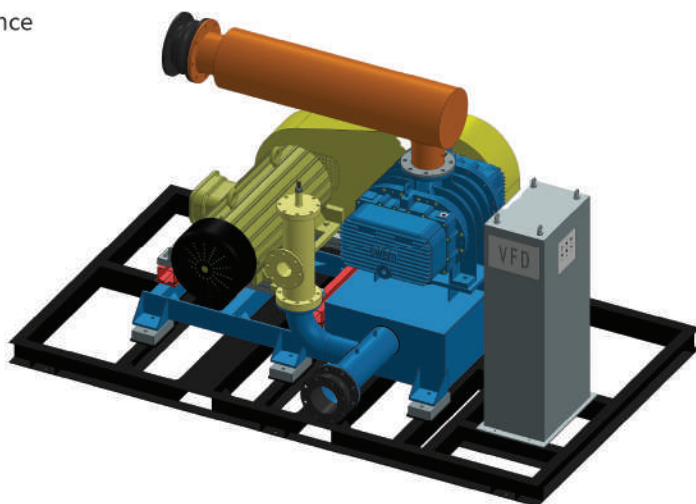

- User Friendly and Process Friendly machine.
- We acknowledge the best performance and result from valued customers.
- Thanks to Helical Design profile to enhance performance and met customer expectation.
- Highest Efficiency.
- Lowest running Cost.
- Superior Performance over other blower type.

Features

- AI enabled controlling
- Equipped with 4.0 industrial automation concept

Offering Range

- Wide range with flow upto 35,000m³/hr
- Discharge pressure upto 1.1 bar (g)

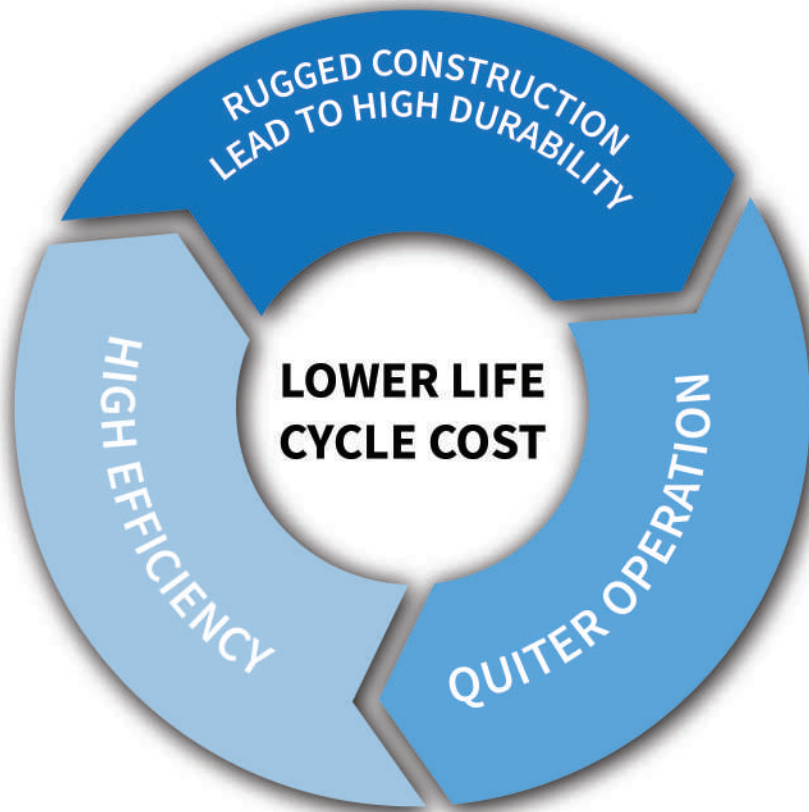

SALIENT FEATURES OF HELICAL SERIES BLOWER

- Ruggedly built for working under tough conditions, high load transmission & higher operating speeds.
- Computer generated Axcel Series lobe-profile optimizes high volumetric efficiency.
- Helical heavy duty timing-gears, shrunk fit on rotor shafts make reliable & accurate fitment.
- Guaranteed oil free conveyance.
- Effective oil lubrication of at both end bearings and gears.
- Suitable for positive and negative conveying and for top, bottom or side discharge.
- Side suction or side discharge arrangement available on select models.
- Special sealed models for gas conveying and for vacuum application.
- Provided with inbuilt pulsation Dampeners.
- Rotating parts dynamically balanced to finer grades.
- Six number of bearings.
- Heavy Duty Shaft.
- Special Double Acting Metallic Sealing System.

It's all about...

SAVINGS!

*We are strong believer in the philosophy of
"Total Customer Satisfaction"*

Committed to Sustainable productivity & advance Technical solutions!

WATER, WASTE WATER TREATMENT PLANTS AND ENVIRONMENT SECTOR

- Tank Aeration
- Digester Mixing
- Big Gas Boosting, Conveying
- Process Air
- Air Scouring
- Vacuum Truck Blowers
- Filter Backwash
- Grit Removal
- Sludge Mixing
- SBR, MBR, FBR, MBBR

POWER PLANT

- Ash Conveying
- Fluidisation
- Flue Gas Desulphurisation

METALLURGY

Steel, Aluminium, Mining, Copper, Nickel Plants

- Lime Calcination Plants
- Pneumating Conveying
- Oxygen Plant (VPSA)
- Mixed Gas, Coke Oven, BF Gas Boosting
- Smelting Plants
- DRI Plants
- Engine driven Emergency Blowers

CEMENT PLANTS

- Conveying
- Fluidising
- Air Lift
- Blending
- Pneumatic Conveying
- Vacuum Trunk Blower for Cement/Ash Conveying
Line cleaning
